

EcoEngineers has developed customized training and education programs under our RIN Academy brand to help educate clients on clean energy regulations to empower better informed biofuel project development decisions such as feedstock selections, contract negotiations, technology integration, registration and compliance milestones, energy credit realization and marketing strategies.

All RIN Academy Workshops include a comprehensive, training and education of the USEPA Renewable Fuel Standard (RFS), Low Carbon Fuel Standard (LCFS) of California and Clean Fuel Program of Oregon. EcoEngineers team of regulatory consultants will customize content to your particular project and the curriculum includes the history of legislative and regulatory development of the RFS, LCFS and CFP, industry terminology to establish a common understanding for workshop attendees. Also included is an overview of energy credit markets, discussions of current technologies, contract negotiations such as offtake, utility pipeline access, gas and RIN marketing and case studies. All workshops are custom-tailored to the client's specific project.

The following workshops are presented in a building block format to show the relationship between project development activities, regulatory decisions, market valuations and registration and compliance timing including establishing Carbon Intensity through GREET 2.0, to fully participate in the clean energy programs:

- **RFS 101**
- **LCFS 101**
- **Biogas 101**
  - **Offtake Contract & Negotiations**
  - **Gas & RIN Marketing Strategies**
- **Kernel Fiber Now**
- **Custom Program Development**
- **LCFS Verification**

*“ Excellent and informative presentation! All involved were obviously well versed in their areas of expertise and the overall quality of the seminar was top notch.”*
