

Energy Management Team (L-R): Joe Cooney, Regulatory Consultant/Civil Engineer | Shashi Menon CEO | Jim Ramm P.E. Director of Engineering | Andrew Clapp, Regulatory Consultant | Lei Zhu, Ph.D. Regulatory Consultant/Chemical & Agricultural Engineer | Zhiachong Wang, Ph.D. Carbon Analyst/Agricultural & Environmental Engineer

EcoEngineers is a renewable energy consulting firm working hard to build out a clean energy economy. Since 2009, we have worked alongside renewable fuel producers to help them navigate clean energy regulations, protect their investment, and connect them to markets. Our team of renewable energy professionals includes expertise from both sides of the meter. We are technology agnostic and low carbon solutions focused.

## **Energy Management Solutions will help you transform your energy platform, add value to your product, and create a competitive advantage for your company**

Today's energy markets incentivize and reward producers who can provide low carbon intensity (CI) products to the marketplace. Our comprehensive energy management program will evaluate your entire energy portfolio and establish a low CI footprint for your facility. Together, we will define a scope of services and strategy to evaluate and implement solutions that will result in lower carbon intensity and create a return on investment at your facility.

The value of energy management is measured not only in CI reduction but also in direct energy savings.

Energy Management Solutions Services:

- Energy Usage Assessment
- Life Cycle Analysis
- Biomass & Wastewater Studies
- D3 Kernel Fiber Co-Processing
- CCS Program Development
- Financial Impact Modelling & Analysis
- Technology Ownership vs PPA Evaluation
- State Incentives and Loans
- Technology Assessment
- Wind
- Solar Steam
- Solar
- CHP
