

EcoEngineers has developed customized education and training programs under our EcoUniversity™ brand to empower our clients to make smart decisions and help them optimize their performance. Key personnel from EcoEngineers will present comprehensive training and education of the Renewable Fuel Standard (RFS), Low Carbon Fuel Standards (LCFS) and Clean Fuel Program per USEPA, California CARB and Oregon's DEQ. The workshop curriculum includes the history of legislative and regulatory development of clean energy regulations and industry terminology to establish a common understanding for workshop attendees.

The following modules are presented in a building-block format to show the relationship between project development activities and regulatory decisions, and timing required to fully participate in the program. Modules include market valuations, registration and compliance, establishing carbon intensity through GREET 3.0, LCFS Verification, Quality Assurance Programs, RIN compliance, and much more.

Our programs

- RNG Workshop
- RFS 101
- LCFS 101
- CFP 101
- Kernel Fiber Now™
- Carbon 101
- RIN Academy Workshop
- LCFS Verification-ready Workshop
- Custom Program Development also available based on your needs

"Excellent and informative presentation! All involved were obviously well-versed in their areas of expertise, and the overall quality of the seminar was top notch."
